LIGHT

LIGHT

LIGHT

LIGHT

Begins with a decision.
With proportion.
With detail.
With mindfulness.

SPECTRUM STUDIO

is a design space where light is treated as an integral part of architecture — not an add-on. We create objects and luminaires that organize space, build atmosphere, and remain relevant over time.

We design calmly and thoughtfully, with people, function, and the long-term value of each project in mind.

SPECTRUM STUDIO was built on the foundation of 36 years of experience of the SPECTRUM LED brand in the lighting industry. It is a design, technological, and manufacturing backbone that allows us to maintain control at every stage — from the first sketch to final execution. Thanks to this, we deliver refined, reliable solutions ready for real-world implementation. All our products are proudly designed and manufactured in Poland.

ALIEN

Form. Calm. Light.

An original luminaire designed and crafted entirely in Poland by Spectrum Studio — with full control over proportion, detail, and finish.

The inclined form and soft proportions create atmosphere without dominance. The matte, light surface of the shade paired with the warm accent of the base's natural wood finish creates a calm, material contrast.

Here, light is a natural extension of the form: present, yet unobtrusive.

FIBRA TRIO

Rhythm in space

Three luminous forms,
one calm rhythm.
A light composition that
organizes space and builds
atmosphere.

An original design in which composition is just as important as light. Three forms suspended at different heights create a vertical arrangement that guides the eye and organizes the space without a sense of heaviness.

The soft shapes of the shades and the accent of natural wood finish allow the luminaire to blend naturally into the interior architecture. Designed and manufactured in Poland.

FLOW

A fluid form. A controlled direction.

A signature luminaire with a clearly defined, organic line.

Its dynamic, flowing shape gives it direction and makes it possible to deliberately build composition in space.

FLOW was designed as an element that organizes an interior through movement — it guides the eye and defines an axis without overpowering the architecture.

Its soft geometry breaks the linearity of a space, introducing balance between structure and freedom.

The matte finish emphasizes the purity of the form, and the option to produce the luminaire in any color allows it to be precisely tailored to the design concept — whether as a subtle accent or a bold compositional feature.

Designed and manufactured entirely in Poland by Spectrum Studio — with full control over proportion, detail, and the quality of light.

PIXEL

Movement. Precision. Light.

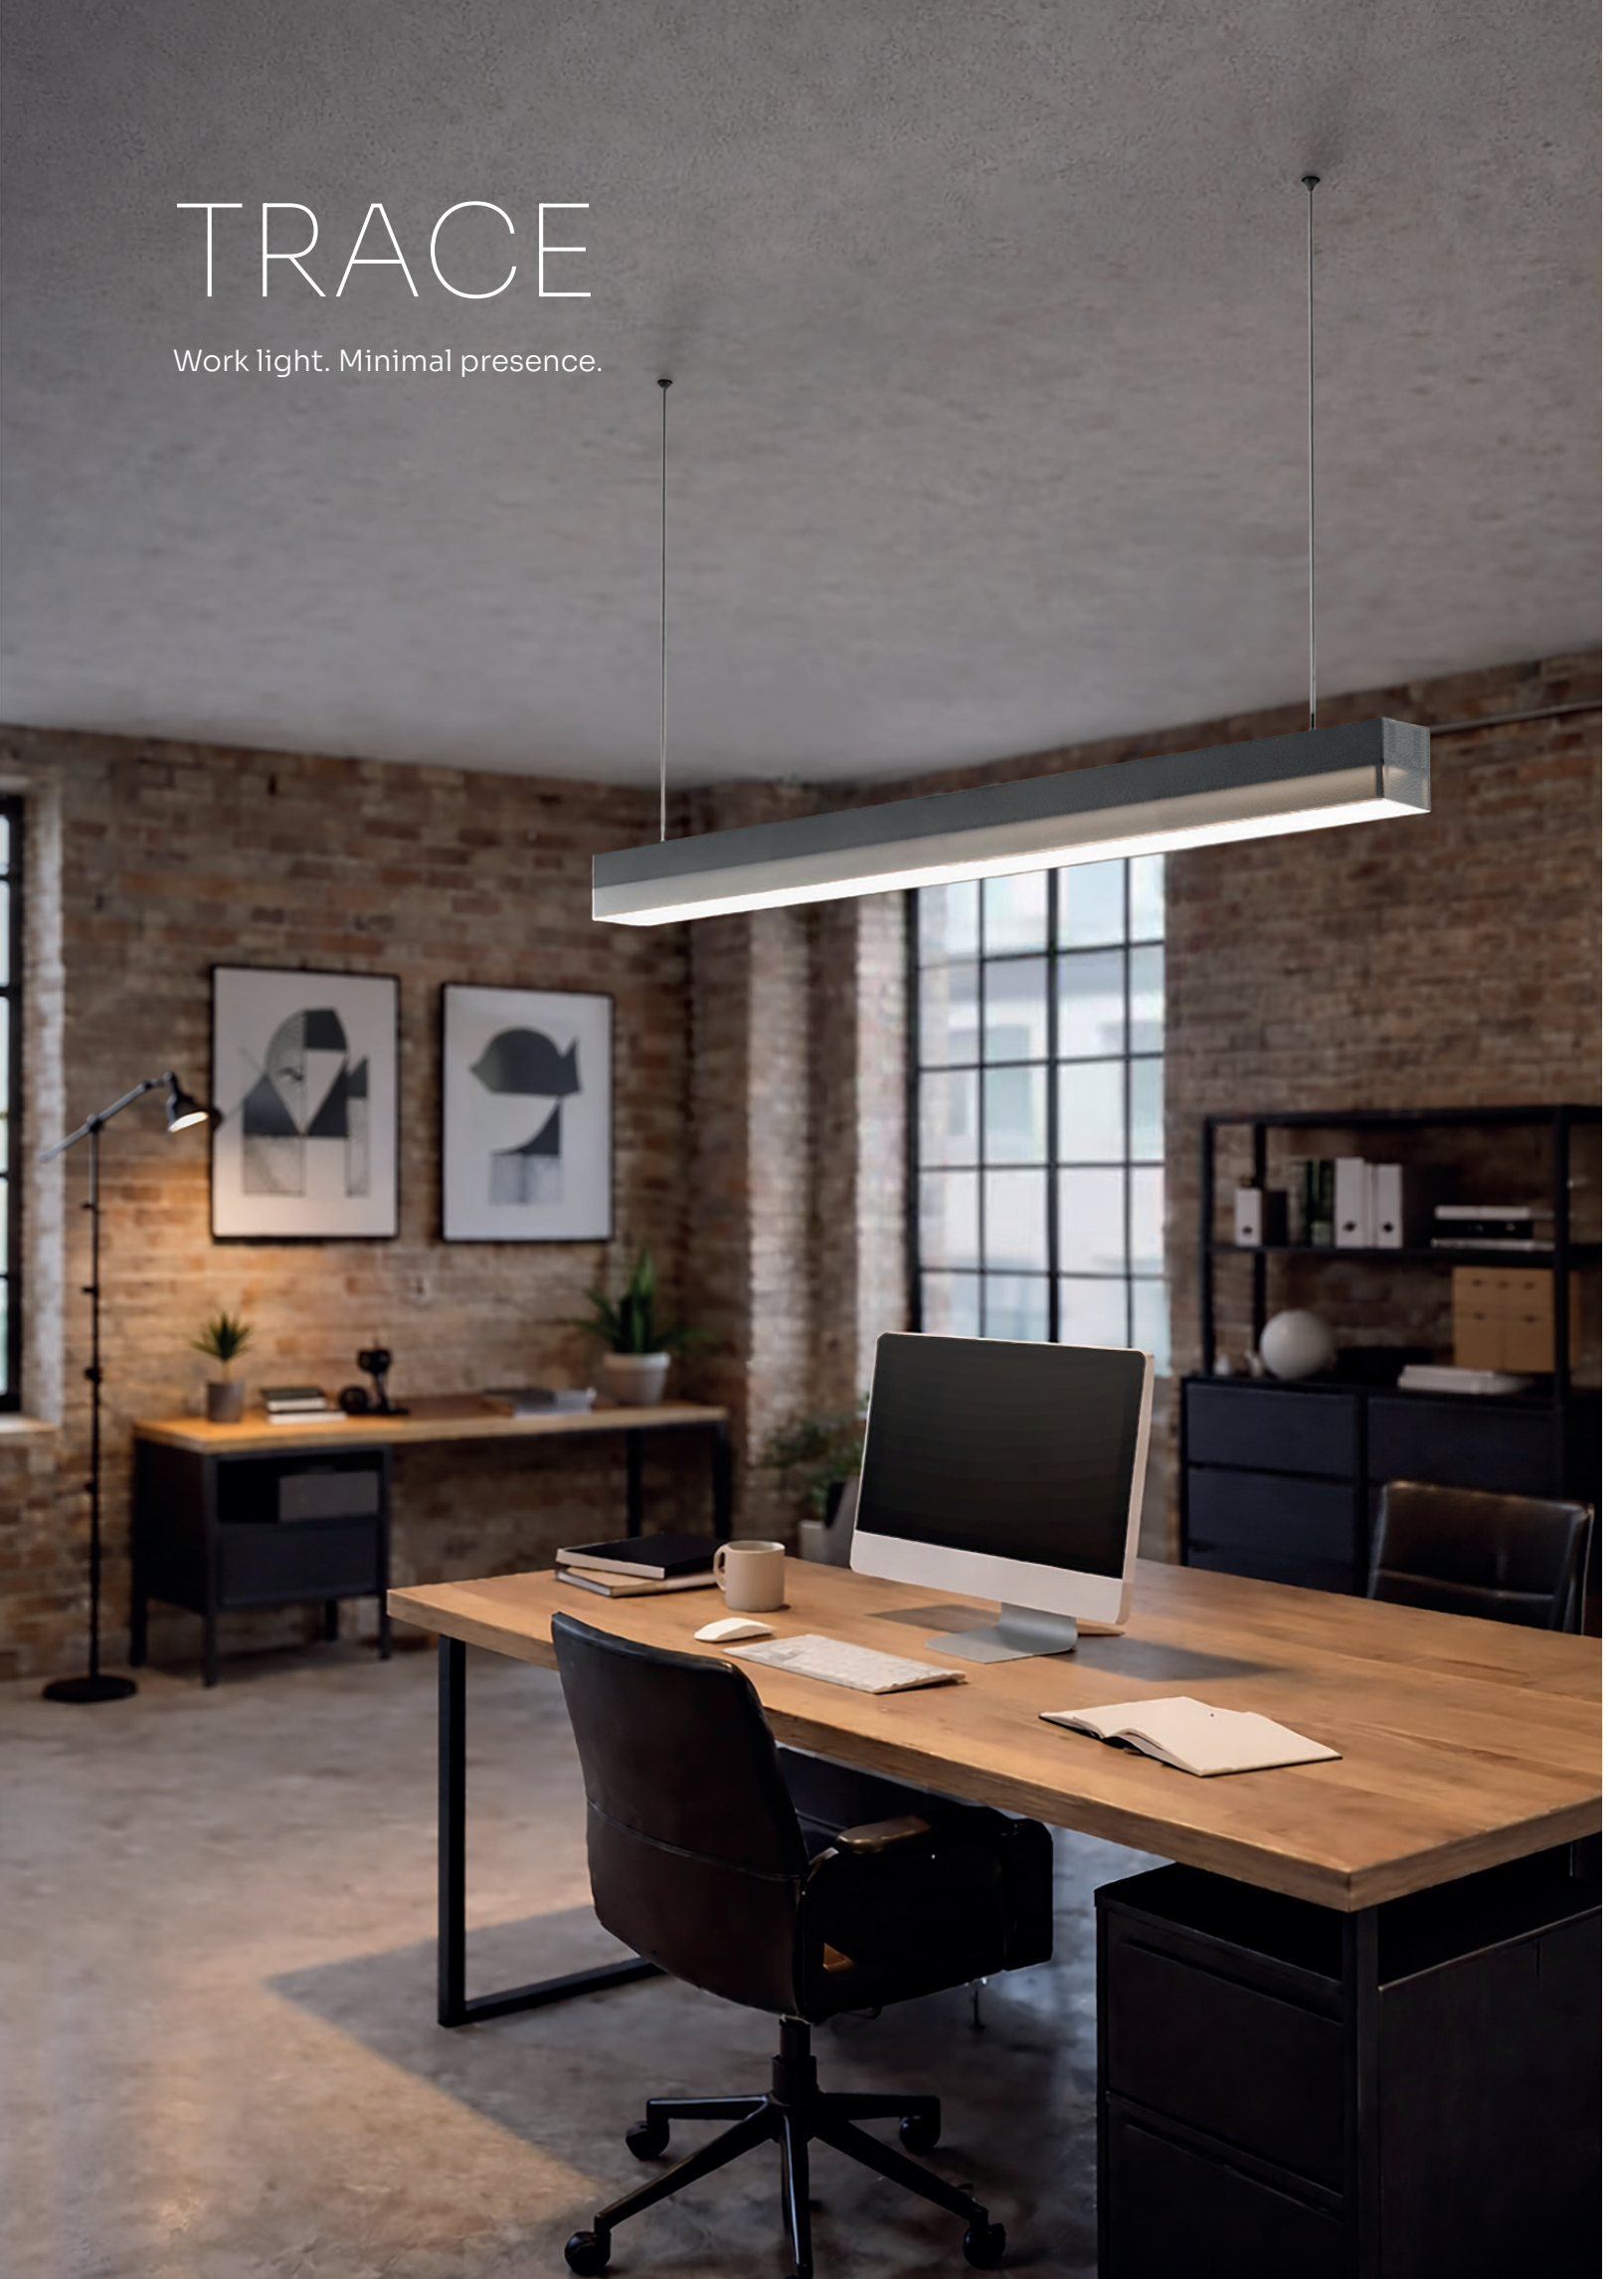

An original design in which form defines the way light is present.

Clearly defined lines and a geometric head give it a modern, structured character. The combination of a matte, light surface with the base's natural wood finish introduces warmth and balance. PIXEL does not dominate the interior — it is a functional accent that organizes the space and highlights its character.

Designed and crafted entirely in Poland by Spectrum Studio — from concept to detail.

TRACE

Work light. Minimal presence.

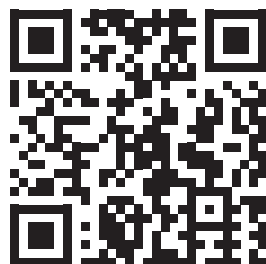

A transparent luminaire for offices that provides light while leaving space. Minimal form. Maximum function.

TRACE was designed for modern workspaces where comfort, ergonomics, and visual order matter. Its transparent housing gives it a sense of lightness, while the linear form blends discreetly into the interior architecture. This is light that supports concentration without imposing its presence.

TRACE is a solution for projects where long-term quality of use, design consistency, and ease of implementation are essential.

Designed and crafted entirely in Poland by Spectrum Studio.
